

Loading Bays and Associated Equipment

Solutions for warehouse and distribution facilities

BID Group

BID Group can draw on many years experience to offer cost effective industrial door and associated equipment solutions to problems created by traffic flow, heat loss, plant re-organisation and health and safety considerations within the distribution industry. By working in partnership with companies, BID Group is committed to providing a high level of individual customer support, a focus encouraged throughout the company.

With having this philosophy and working alongside our clients in the warehouse and distribution sector, overtime BID Group has fully come to understand the specialist requirements and demands placed upon this industry sector.

Therefore we are able to supply and install the most efficient and reliable equipment for loading bays and warehouse facilities. Specialist engineers are able to install, repair and service all types of industrial doors, dock levellers, shelters, gates, barriers and associated equipment.

As well as replacing products, at BID Group we have built up our reputation in servicing, repairing and maintaining our own and competitor products, sourcing and supplying parts for maintaining the products, and liasing with on-site maintenance personnel to provide technical support.

Refurbishments

A field BID Group has excelled in is the refurbishment of warehouses' industrial doors and associated equipment. With merges and acquisitions happening, (also taking over disused warehouses) companies occasionally find themselves taking over a building that requires the warehouse equipment bringing up to meet the current health and safety standards, handle the volume of traffic and provide smooth operations.

Over the years BID Group have worked alongside blue chip distribution companies in repairing, installing new or relocating equipment within a warehouse. BID Group ensures that the best cost effective solutions are recommended with realistic time lines, so that companies can operate from the unit within an arranged programme of works and within a budget.

Dock Shelters

Shelters are designed to offer a relatively high sealing solution between a warehouse and a wide range of vehicles.

Benefits

- Aesthetically pleasing
- Protect the movement of goods between loading bays and vehicles

Dock Levellers

Our dock levellers are there to offer safe movement of goods. We have a large range available to suit applications.

Benefits

- Heavy duty and hard wearing
- Easy to install and minimal maintenance

Dock Pads

Our dock levellers are there to offer safe movement of goods. We have a large range available to suit applications.

Benefits

- Heavy duty and hard wearing
- Easy to install and minimal maintenance

Dock Buffers

Buffers/ bumpers are designed for protection in mind. They are there to prevent and reduce impact damage between vehicles and buildings. We have a large selection available.

Benefits

- Heavy duty and hard wearing
- Easy to install and minimal maintenance

Wheel Guides

Our wheel guides are there to ensure vehicles are aligned and in the correct position for off loading and loading.

Benefits

- Simplistic structure
- Hard wearing and minimal maintenance
- Guide vehicles into correct position
